Jon;

I talked to Walt Ivey this morning. They became aware of the additional chemical yesterday I am guessing the same time others became aware of the issue from the MSDS sheets.

Walt said that they did have product from the tank and have sent it for a complete analysis. They are hoping to have the information this afternoon.

He also said they have samples from the plant taken early in the response that they are also analyzing for PPH. I will let you know when those results become available.

Bill
